

Deliverables check

Check point

These are main check points. Check closely if you need.

- ✓ Did you make it following instruction?
 - ✓ Did you make it following format of specification?
 - ✓ Is instruction of making and revision reflected?
- ✓ Did you layout following design?
- ✓ Are HTML, CSS correct?
 - ✓ Is there any mistake (overage and shortage of tag) in validation check?
- ✓ Are deliverables correct?
 - ✓ Is there any unnecessary file?
 - ✓ Did you store all deliverables?
 - ✓ Did you submit file by designated form?

Check difference between design and deliverables.

Take a each browser capture and pile it by Photoshop to confirm mismatch. If there is mismatch, adjust margin, padding, line-height, letter-spacing.

This is for check that you can layout following design exactly or not, so it is not for remove difference between browsers.

**Text space have big difference between browsers, so you don't need set exactly.
Text space of mac font is big, so you should be careful when severe layout.**

Mismatch between images become 0.

Changing number of line because of text space difference between browsers is OK.

Confirm it by changing opacity or Multiply.

**You can't layout from top to bottom exactly.
So, if you can layout without mismatch in each part, it is OK.**

Check designated image size

Check that sliced size and designated size by HTML is correct.

Chrome Developer Tools

If image size and designated size are different, you

- miss slice size.

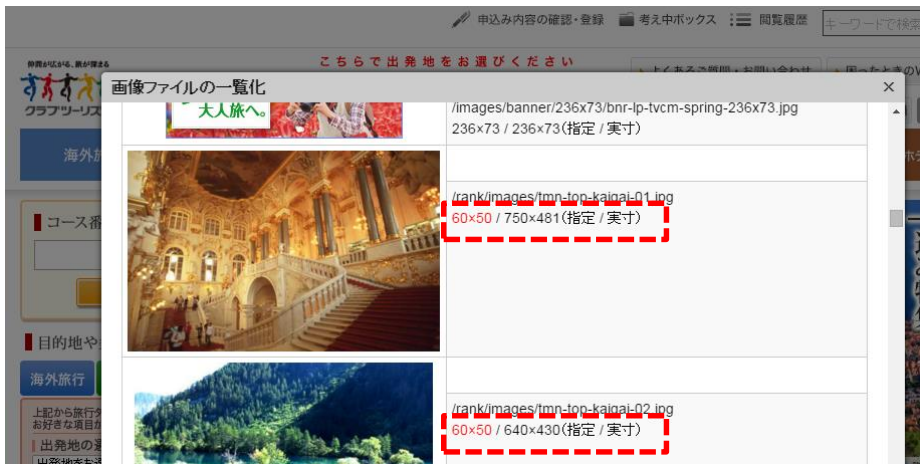

or

- miss to designate size of width, height.

So, confirm image and revise it.
